

SUMMARY

Senior software engineer with 5+ years of experience building Rust-based backend systems for fintech and healthcare platforms. My work spans distributed services, async architectures, cloud infrastructure, and API design, with a focus on maintainability, performance, and pragmatic engineering decisions. I enjoy simplifying complex systems and improving reliability across evolving codebases.

SKILLS

- **Programming:** Rust, C++, Java, Kotlin
- **Databases:** PostgreSQL, MongoDB
- **Tools:** Git, GitHub Actions, GitLab CI, AWS, Docker, bash, Linux, Kubernetes, Claude Code
- **Languages:** English (B2), Polish (A2), Belarusian, Russian (Native)

WORK EXPERIENCE

Senior Backend Software Engineer (Rust) at Lunu Pay

Aug 2024 – Apr 2026

Berlin, Germany (remote)

- Developed a company-internal **low-code** solution to exchange and transfer cryptocurrencies across different exchanges (Kraken, Coinbase, Gate), choosing the optimal route depending on fees and trading pair availability
- Implemented various API integrations with different payment gateway providers
- Introduced user data collection and the exchange of this data with counterparty crypto-asset service providers in order to comply with European Union's **Travel Rule** regulation
- Refactored synchronous **actix**-based monolithic codebase into asynchronous microservice design via **AI-assisted approach**
- **Tech stack:** Rust, axum, actix, actix-web, reqwest, diesel-async, WebSocket, gRPC, PostgreSQL, Kubernetes, AWS

Backend Software Engineer (Rust) at Edenlab

Feb 2022 – May 2024

Kyiv, Ukraine (remote)

- Took active part in development of the high-performance **FHIR server (Fast Healthcare Interoperability Resources)**
- Made **Apache Kafka** consumer/producer logic asynchronous, speeding up data synchronization between **MongoDB** and **Elasticsearch** by **10x**
- Improved filtering logic for multi-level nested **ValueSet expand operation**. This feature was successfully demonstrated during the 68th conference of German Association for Medical Informatics, Biometry, and Epidemiology (GMDS)
- Enhanced patient record security by implementing role-based access control (RBAC) in compliance with **SMART on FHIR**, passing **ONC (g)(10) certification** and securing a significant contract with a major American customer in healthcare field
- Introduced dependency cache into GitHub Actions with the help of **Docker BuildKit** and **sccache**, speeding up CI/CD pipelines for Rust projects by ~60%
- Refactored core logic in health insurance service, leading to **~30% line count reduction** and improved robustness
- **Tech stack:** Rust, axum, gRPC, Apache Kafka, MongoDB, Elasticsearch, PostgreSQL, Keycloak, Kubernetes, AWS, Docker

Rust Software Engineer at Polytech Software

Jul 2021 — Jan 2022

Kyiv, Ukraine (remote)

- Participated in development of data backup and malware detection software with cloud storage
- Implemented retry logic for data backup transactions
- Fixed various bugs, wrote tests, introduced clippy linter, improving code quality
- Communicated in English with coworkers & American customer every day
- **Tech stack:** Rust, tokio, RocksDB, AWS

RPA Engineer (Java & Rust) at Itransition

Apr 2019 — Apr 2020

Minsk, Belarus

- Automated data entry into JD Edwards EnterpriseOne from .xlsx specs using Rust with OpenCV and UI automation library
- After the deployment of Application Interface Services, migrated data entry pipeline to Oracle's AIS Java Client SDK, improving robustness compared to UI automation approach
- Worked with Oracle database used as data storage for JD Edwards EnterpriseOne
- Communicated in English with Japanese customer
- **Tech stack:** JD Edwards EnterpriseOne, Oracle Database, Rust, OpenCV, Java

OPEN SOURCE

rustc github.com/rust-lang/rust/pull/99393

- Simplified compile errors involving const generics

rust-analyzer github.com/rust-lang/rust-analyzer/pull/12778

- Support for negative, char and bool const generics

AstroGraphicRust github.com/Logarithmus/AstroGraphicRust

- Simulation of interplanetary trajectories (e.g. Voyager 2) based on patched conic approximation

EDUCATION

Belarusian State University of Informatics and Radioelectronics

Sep 2017 — May 2021

Bachelor of Science, Programmable Mobile Systems

Minsk, Belarus
